579EV

Peterbilt leads the industry in alternative powertrain offerings. This is led by Peterbilt's flagship Model 579EV. The 579EV is joined by the Model 220EV and Model 520EV for the most complete lineup of electric vehicles in the industry. The 579EV provides environmentally conscious customers a zero emissions, high-performance vehicle for clean, efficient operation and lower overall maintenance.

The 579EV Day Cab configuration features a battery-electric drive system that uses the energy stored in large packs of thermally managed lithium iron phosphate batteries to meet propulsion and other power requirements. Varieties of innovative, advanced technologies use the battery energy efficiently while achieving superior vehicle performance.

The 579EV is ideal for short haul and drayage applications in port operations. These applications provide many opportunities for stops and starts and the use of regenerative braking, which transfers energy back into the battery packs to extend operating range and reduce brake pad wear, providing energy efficiency with a smooth, quiet ride.

TECHNICAL SPECIFICATIONS

- GCWR – 82,000 lbs.
- Continuous Power Rating – 536 hp
- Peak Power Rating – 670 hp
- Energy Storage Capacity – 400 kWh
- Battery Recharge Time – 3 Hours
- Estimated Daily Range – 150 Miles
