

K400

(approx. 4,000 U.S. gallons)

ON PETERBILT 548

DUST CONTROL • COMPACTION • WATER DISTRIBUTION

Built for road construction, site development, earthmoving, and municipal applications, the Klein K400 on the Peterbilt 548 combines approximately 4,000 gallons of water capacity, patented TRAP Tank Technology™, and proven vocational chassis performance to tackle demanding jobsite conditions with confidence.

WHY CONTRACTORS CHOOSE KLEIN

TRAP TANK TECHNOLOGY™

Patented trapezoidal tank design enhances operator safety through a lower center of gravity, improved visibility, and greater vehicle stability on and off the jobsite.

PRECISION FLOW CONTROL (PFC)

Multiple rows of transverse and longitudinal baffles reduce water surge, improve load stability, and provide more controlled water movement for safer operation on uneven terrain and changing jobsite conditions.

OPTIONAL SMARTSPRAY® WATER CONTROL SYSTEM

Optional SmartSpray® water control system delivers precise water application and consistent coverage for dust suppression, compaction, and material conditioning. Adjustable discharge patterns help maximize efficiency across a variety of jobsite conditions.

HEAVY-DUTY CONSTRUCTION

Built for long-term durability, the Klein K400 features flanged heads, integrated fenders, reinforced structural mounting systems, and robust tank construction. Combined with PFC internal baffling, these design elements deliver exceptional strength, reliability, and service life in demanding construction environments.

CERTIFIED MANUFACTURING QUALITY

Every Klein tank system is manufactured in Jacksonville, Texas under an ISO 9001:2015 certified Quality Management System and supported by AWS-CWI managed welding oversight. This commitment to quality ensures consistent workmanship, dependable performance, and long-term customer value.

FEATURED EQUIPMENT

- Approx. 4,000 U.S. Gallon Capacity
- New Peterbilt 548 Chassis
- TRAP Tank Technology™
- PFC Interior Baffling
- Integrated Fenders
- SmartSpray®
- Klein Water Pump
- Heavy-Duty Discharge Equipment

Trap Tank

Klein
PROVEN VALUE.
~ SINCE 1957 ~

WATER PUMP

Featuring an exclusive and innovative design, Klein water pumps are both heavyduty and easy to maintain. Engineered for high performance, they provide the ultimate solution for maximizing water discharge efficiency.

VALVE SPRAY COMBINATION

Klein's spray head valve combination delivers precision water control for heavy-duty applications. Fully adjustable fan discharge sprays let operators fine-tune flow for any terrain, boosting efficiency and coverage.

1 Trap tank, the industry's strongest, lowest center of gravity & safest mobile liquid distribution tank system

2 Exclusive Klein water pump, valves, remote controlled turret monitor & related discharge equipment

3 PFC Precision Flow Control; multiple rows of transverse & longitudinal baffles

4 Tank integrated fenders significantly add to structural integrity and strength

5 Flanged heads welded 100% inside and outside for superior tank strength
